Introduction

It is said that shrouded in the mists of time is a "winning", "failsafe", gambling system that can be used today to make "easy" and "unlimited" money. It is also suggested that the system was used by the Greeks, and other ancient cultures, in dice and other gambling games; and today, it is further suggested that, the system is particularly suitable for winning at Roulette as offered by online casinos.

This "winning system" is very simple and utilizes the principle of an even-money bet, doubled in sequence, being placed against an odds-or-evens 'roll'.

However, because of high value minimum bets and moderate house/table limits, this system has not been widely used, or very successful, in the live casino setting.

The Online Casino Enters the Scene

Today, with the advent of the 'online casino', it is claimed that this simple system can be used to create a positive flow of money.

Such claims include (taken verbatim from various internet sites, and adverts, etc):

"Invest a couple of minutes of your time to see
how easy you could be earning a whole lot of money each and every day!"

"How to win - every time!"

"This is probably the most popular way to make money - legal and easily!"

"The effectiveness of this system is 100% proven,
and the method has a great way to get you started to win."

"Your winnings will increase by 90%,
and you have the opportunity to earn tons of dollars each and every day!"

"START winning lots and lots of dollars a day at roulette. (I know people who have quit their part time job because this gave more money.)"

"SAVE hundreds of dollars (if not more), by not wasting them on worthless 'money-making systems' or books on how to beat the casino - they are nothing else but CHEAP CRAP!!!"

"LIVE the way You always wanted: spend more time with your family;
go on vacation 6 times a year;
never worry about paying your bills on time; and so on..."

"GET positive results over night!"

"Are you ready to take some action for your own income?"

Sounds good, doesn't it!

And there are even testimonials - these are taken verbatim from <http://www.bunkepul.com> (17 Sept 2008):

Kurt S., Amsterdam, Netherland

"I started winning money right after reading just like said on the website. There's no guesswork at all."

Daniel K., St. Catherines, Canada

"I make a solid \$2500 a month by playing less than two hours a day. This is the only winning roulette system I've ever seen."

Yongcheon P., Pusan, Korea

"Making a million in roulette may be what we like to hear but it is too good to be true. This is the best casino strategy available."

Tempting, isn't it!

And there are thousands of such adverts, and claims, scattered throughout the internet.

But is it true?

Is there such a system?

Can "tons of dollars" be made with little effort?

Read on to find out.

So, what is the system?

The system, often known as the "Red and Black System", is very simple, and is typically outlined as follows:

Once you have registered with the casino of your choice, and have downloaded their interface software to your computer, you are ready to begin.

Initially 'play-for-fun', if the casino has the facility, and once you have seen that the system works, you can then deposit real money and begin seriously.

It is recommended that you make an initial deposit of 100 to 150 local currency units (e.g. Dollars, Euros, or Pounds Stirling, etc); and it is suggested that this will be the only "investment" you need.

Important
Remember that this is a gambling system,
so do not play with any money that you cannot afford to loose
(This is a typical disclaimer)

The System

Note: In the following, \$1 represents one currency unit.

Using the table below, Start with Step 1, and simply follow the instructions:

THE RED AND BLACK SYSTEM	
RED SEQUENCE	
Step	Instructions
Step 1	Place \$1 on Red - Spin the wheel - Go to Step 2
Step 2	If Red comes up - You win even money - Sequence Closed - Now go to Step 5 ; Else, Black or Zero came up - Go to Step 3
Step 3	Double your bet on Red - Spin the wheel - Go to Step 4
Step 4	If Red comes up - You win even money - Sequence Closed - Now go to Step 5 ; Else, Black or Zero came up - Go back to Step 3
BLACK SEQUENCE	
Step	Instructions
Step 5	Place \$1 on Black - Spin the wheel - Go to Step 6
Step 6	If Black comes up - You win even money - Sequence Closed - Now go to Step 1 ; Else, Red or Zero came up - Go to Step 7
Step 7	Double your bet on Black - Spin the wheel - Go to Step 8

Step 8	If Black comes up - You win even money - Sequence Closed - Now go to Step 1 ; Else, Red or Zero came up - Go back to Step 7
Step 10	If Red comes up comes up - go back to Step 8

Note: If Zero comes up, simply continue doubling your bet as normal.

Summary - Red and Black System

- If you bet on one colour and it comes up, that sequence is closed and you immediately start again by betting \$1 on the other colour.
- If you bet on one colour and the other colour comes up, then double your bet, and repeat until the colour your chosen colour comes up. When your chosen colour comes up, that sequence is closed and you immediately start again by betting \$1 on the other colour.
- If Zero comes up, simply continue doubling your bet as normal.
- At the end of every successful sequence played, you will have increased your winnings by the amount of your first stake (\$1, \$5, etc).

This means that you never 'win big', but you do increase your money slowly and steadily.

- It is not recommended that you stake more than \$5 as your initial bet. The doubling process would soon cause you to exceed the house limit.
- For best results, do not vary from the procedure given.

That's It!

That's it - that's the system - and in theory it looks good!

But is it?

Read on...

Variations on a Theme

There are some variations on the Red and Black System theme - Some players alternate Odd and Even, rather than Red and Black; while other punters continuously play a single colour (Red or Black) or stick with either Odd or Even.

The punter is always recommended to experiment with the system, and to see what they are comfortable with, and what works for them.

What Online Casinos can be used?

The following casinos are reputed to be compatible with this system.

Note

The author has not verified any claims or links to any online casino

The casinos marked with an asterisk are believed to support a "play for fun" facility so the punter can test and be comfortable with the system before they actually gamble with their own money:

ONLINE CASINOS		
*Euro Grand Casino www.eurogrand.com	*Carnaval Casino www.carnavalcasino.com	*Prestige Casino www.prestigecasino.com

Dublinbet Casino www.dublinbet.com	Blackpool Club Casino www.blackpoolclub.co.uk	Mansion Casino www.mansion.com
Affiliate Club Casino www.affiliateclub.com	Casino.com www.casino.com	*32 Vegas casino www32vegas.com

There are literally hundreds of online casinos to choose from, and the punter is advised to shop around - some casinos offer incentives, such as a credit incentive, for the punter to join up with them.

Basic Requirements

When choosing an online casino there are three basic requirements which are needed to ensure that the Red and Black system will work:

- 1) Roulette (European Roulette with the single zero). Do not use a casino which has both "0" and "00" as this greatly reduces the odds in your favour.
- 2) Minimum bet is One currency unit (Dollar, Euro, Pound Stirling, etc)
- 3) Betting limit is at least 250 to 300 currency units (Dollar, Euro Pound Stirling, etc)

Also, as mentioned before, a "play for fun" facility is useful for the new player, and those who want to test out the system first.

However, it has been the author's experience that the "play for fun" facility in no way represents what the "live play" will be like. See "Is this a Scam?" in the "Frequently Asked Questions" section.

Frequently Asked Questions

Q) Is this a scam?

A) Although the Red and Black system is a genuine gambling strategy, you have little chance of winning with it.

When you first try out the system in the "play for fun" facility of the online casino, you will absolutely "rack" up the winnings. However, when you play on the live tables, you will find that there are regular runs of consecutive single colour or odd or even (10 or more, often split with zero), which will clean you out. See the appendix, "Spins, Costs, and Possible Losses - Just the Facts" for more details.

Q) Is this system cheating?

A) No, this is a genuine gambling strategy that the casinos are very happy for you to use.

In fact, the Red and Black system is widely touted, on the internet, as a "miracle cure" for all your financial problems. Unfortunately, the sites "revealing" the system are simply affiliates and click-through sites funnelling people towards a specific casino or group of casinos.

Q) How much can I earn using this system?

A) With the way that the online casino works, it is doubtful that you will earn anything substantial. In fact you could be seriously out of pocket.

Q) Why can't the Red and Black System Guarantee success?

A) There are two reasons why the Red and Black system cannot guarantee success: 1) you do not have enough money to continue to double your bet as needed, or 2) your bet reaches the maximum limit allowed by the house/table. See the appendix, "Spins, Costs, and Possible Losses - Just the Facts" for more details.

Q) What Could I Win?

A) The maximum you can win in any sequence is your original stake. If your original bet was 1\$, then that is what you will win - if it was \$5, then that is what you will win.

See 'Appendix - Spins, Cost, and Possible Losses' for a complete picture.

Q) What could I lose?

A) For example, when playing a \$1 initial stake in a casino with a \$300 limit - you must win the sequence within 9 spins of the wheel (to cover the 10th spin would exceed the table/house limit).

The cost of a 9 spin outlay, and one which you are encouraged to make, is \$511.

Consequently, it is possible that you will have to stake \$511 to win \$1 - and still loose.

That is why the casinos like you to use this system - you can "loose big", and you always win small.

See 'Appendix - Spins, Cost, and Possible Losses' for a complete picture.

Q) What are the statistical chances that 7 consecutive spins would produce the same colour or odd/even?

A) With a live, un-tampered, roulette wheel, there is only a 1.12% chance that 7 spins in a row would produce the same colour or odd/even.

However, the online casino does not simulate a live roulette wheel, and their "random number generators" regularly produce long strings of single colour or odd/even occurrences. Often, these long strings are often split by having "zero" or "double-zero" embedded in them.

Q) What happens if Zero (or Double Zero) comes up?

A) If Zero (or Double Zero) comes up, you simply continue to double your bet as normal.

Q) Why are you telling me about this system?

A) I am simply presenting some information - just the facts - that I found interesting. Now you have the information, you can draw your own conclusions.

Further Reading

For further reading, an excellent website to visit is <http://www.realroulettesystems.com> wherein the author says:

"I have created this website to try and dissuade people from wasting money on online (or otherwise) roulette systems.

"I just want to make clear I am not accusing the casinos of anything, I am aware their random number generators are tested, certified and fair, I am merely pointing out flaws in the betting systems.

"Shortly before deciding to make this website I attempted more than one of these systems and have found them all to be useless..."

Unfortunately, the Author of the website does not give their name.

Appendix - Spins, Costs, and Possible Losses - Just the Facts

The Cost of Spinning the Wheel

The following table outlines the cost to spin the wheel using the Red and Black system:

Cost of Each Individual Spin (House Limit of \$300)					Accumulative Cost of Spins / Possible Losses (House Limit of \$300)				
Spin #	Initial Bet of \$1	Initial Bet of \$5	Initial Bet of \$10	Initial Bet of \$20	Spin #	Initial Bet of \$1	Initial Bet of \$5	Initial Bet of \$10	Initial Bet of \$20
#1	\$1	\$5	\$10	\$20	#1	\$1	\$5	\$10	\$20
#2	\$2	\$10	\$20	\$40	#2	\$3	\$15	\$30	\$60
#3	\$4	\$20	\$40	\$80	#3	\$7	\$35	\$70	\$140
#4	\$8	\$40	\$80	\$160	#4	\$15	\$75	\$150	\$300
#5	\$16	\$80	\$160	\$320 House Limit Exceeded	#5	\$31	\$155	\$310	-
#6	\$32	\$160	\$320 House Limit Exceeded	-	#6	\$63	\$315	-	-
#7	\$64	\$320 House Limit Exceeded	-	-	#7	\$127	-	-	-
#8	\$128	-	-	-	#8	\$255	-	-	-
#9	\$256	-	-	-	#9	\$511	-	-	-
#10	\$512 House Limit Exceeded	-	-	-	#10	-	-	-	-

Ouch!

From the above table, we see that there is the possibility (and this happens regularly with online casinos) that the punter reaches the stage where they have laid out \$511 to try and win \$1 - Ouch!

The alarm bells start to Ring!

What Can I Expect to Win?

Using the Red and Black System, what Can I Expect to Win?

What Can I Expect to Win?				
House Limit	\$300			
Initial Bet	\$1	\$5	\$10	\$20
Max No of Spins without exceeding House Limit	9	6	5	4
Max Outlay that Could be Required	\$511	\$315	\$310	\$300
Amount that could be won	\$1	\$5	\$10	\$20

Using the Red and Black System, the maximum you can ever win at one time is your original stake.
